

# WITNESS TO HISTORY:

"Wondrous Inventions of the Modern Victorian Era!"

*"Englishman Thomas Hutchinson  
Traveling Thespian & Parlour Lecturer"*

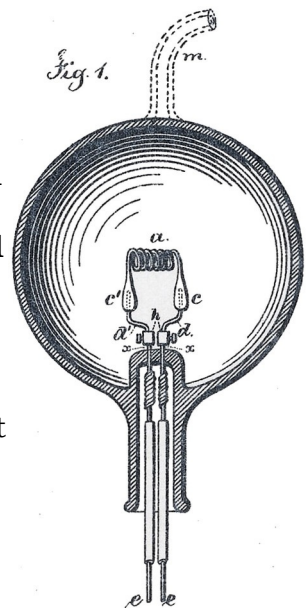

It's "1897" and a loyal (*but not so humble or obedient*) British subject of *Her (still-living) Majesty Queen Victoria* considers the creation and innovation, the many **wondrous machines and inventions** of the just-ending *nineteenth century!*

The steam locomotive, the telegraph, telephone, incandescent bulb, phonograph . . . **the list goes on and on!**

He'll not only talk about how all this technology has changed travel, communications, and commerce forever . . . but also **share his own personal stories** of being just at the right place at the right time **to actually have experienced history in the making, too!**

With proper British pride, he'll highlight some significant

contributions made by British subjects, **bust a deeply believed myth of technological history**, and even venture a few **technological predictions** for the soon-to-be twentieth century.

**AND the GRAND FINALE will be the unveiling and . . .**

**👉 FIRST PUBLIC DEMONSTRATION  
OF HIS OWN {Patent Pending} INVENTION!**

**SATURDAY, OCTOBER 12  
1 P.M. SHARP!**

**ODD FELLOWS LODGE  
267 EAST MAIN ST, HILLSBORO, ORE.**
